Firewall Enhanced Security Package

We take cyber security very seriously here at Regal Court and we, therefore, offer an enhanced security package to clients. The standard firewall package offers port-blocking/forwarding and standard traffic flow rules as needed both in and out, but for just **£20 + VAT per client per month** we can offer an enhanced package which offers the following:

- **Intrusion Prevention Service (IPS)** - IPS uses continually updated signatures to scan traffic on all major protocols to provide real-time protection against network threats, including spyware, SQL injections, cross-site scripting, and buffer overflows.
- **Reputation Enabled Defence Service (RED)** - A powerful, cloud-based reputation lookup service that protects web users from malicious sites and botnets, while dramatically improving web processing overhead.
- **Gateway Antivirus – (GAV)** - Leverage continuously updated signatures to identify and block known spyware, viruses, trojans, worms, rogue-ware and blended threats – including new variants of known viruses. At the same time, heuristic analysis tracks down suspicious data constructions and actions to make sure unknown viruses don't slip by.
- **Weblocker URL Filtering** - In addition to automatically blocking known malicious sites, WebBlocker's granular content and URL filtering tools enable you to block inappropriate content, conserve network bandwidth, and increase employee productivity.
- **Advanced Persistent Threat (APT) Blocker** - APT Blocker uses an award-winning next-gen sandbox to detect and stop the most sophisticated attacks including ransomware, zero day threats and other advanced malware.
- **Geolocation Blocker** – Block data to and from specific locations around the world with country-level filtering.

Many of our tenants already use this package and it is one of the main defences we use on our own network, so we know how good it is! **For more information please email itsupport@wrestparkenterprise.co.uk**
